Spring 1909.

TELEGRAMS: "BARR, LONDON." TELEPHONE: 2991 CENTRAL.

Barr's "Gold Medal" Daffodils.

We are again this season fortunate enough to be able to introduce some really fine NEW SEEDLING DAFFODILS, several of which have been exhibited by us at the Spring Flower Shows, where they have attracted a great deal of attention.

Five Gold Medals awarded 1908.

Our fine displays of New Seedling and other Daffodils have gained the GOLD MEDALS this season at the Spring Shows of the MIDLAND DAFFODIL SOCIETY, Birmingham; ROYAL BOTANIC SOCIETY, London; ROYAL CALEDONIAN SOCIETY, Edinburgh; SHROPSHIRE HORTICULTURAL SOCIETY, Shrewsbury; and BRECONSHIRE HORTICULTURAL SOCIETY, Brecon. At the Spring Show of the ROYAL HORTI-CULTURAL SOCIETY, London, April 28th, our exhibit gained the a highest award, SHLVER-GILT FLORAL MEDAL.

PRESS NOTICES. DAFFODILS AT SURBITON. Extract from "The Gardener's Chronicle," May 23rd, 1908.

"It has been our pleasure for several years to visit the nurseries of Messrs. Barr & Sons, at Surbiton, to see the Daffodils in flower, but we have never until this season received the invitation so late as in May. The flowers have bloomed abnormally late, and small wonder, when one remembers the arctic weather that has characterised the spring of 1908. Not only did the cold retard the flowering of the bulbs, but the heavy rains of April caught them when in bloom, and then, when a few warm days did appear, the flowers were quickly over. Thus, in a measure, we were disappointed, but these flowers are cultivated on such a large scale at Surbiton that there still remained abundant material of interest, and it was an easy task to find some late flowers of the majority of the varieties. In addition, a late duplicate planting of all the best early kinds is practised by Messrs. Barr in order to furnish material for hybridising with later-blooming sorts. The weather on the occasion of our visit was glorious, and in addition to the Daffodils, the great breadths of May-flowering Tulips, with Trises of the Pumila type, Polyanthuses, Ranunculuses, and a best of other hardy spring flowers, made a beautiful picture. The principal entrance to the fields of Daffodils is through a small rock-garden, to which we have often referred in former notes, but we have never before seen it so prettily furnished with flowers.

"Of varieties of Daffodils it may be said that their number is almost endless, and Messrs. Barr's latest list enumerates nearly 400 distinct sorts, which, of course, does not represent all the varieties in commerce, although most of the best varieties are included in it. The first of which we have note is the variety named EVELVN HODGE. It was raised from N, montanus \times N, biflorns, and possesses a white perianth set off with a small, pale-coloured corona.

"MERRY MAID was raised at Surbiton in 1907. This is a tall, late-flowering Narcissus of the Barrii section, with a pure white perianth, tapering in its segments, and crowned by a corona that is yellow and tipped with orange. BIANCA is a Leedsii Daffodil that has its white perianth set off with a lemoncoloured cup, the latter being prettily fluted. AGNES HARVEY is a variety of rather delicate growth; this is another of the Leedsii section. It often develops two or more blooms on a scape, and is to be recommended for its charming form. EGRET has the large, flattened corona of the Engleheartii section, to which it belongs, and beneath its crown the broad, white segments form a perianth of the finest type.

"Amongst the best of recently-raised trumpet Daffodils is C. H. CURTIS. This is a bold flower, having a handsome corona that recurves somewhat at the mouth. The perianth is a deep shade of yellow, but not so intense as the golden cup. Another flower of the C. H. Curtis type is GEORGE PHILLE HAVDON. The mouth of the trumpet also expands in this variety, and it is finely fluted, but the colouring in both perianth and cup is paler than in the flower named after C. H. Curtis, and its appearance is stiffer. KNIGHT ERRANT is also a trumpet Daffodil, but with white perianth and suppur-coloured trumpet. Its parents were probably Mad. Plenip and Cernuus. A beautiful white Daffodil is seen in ELLEBN MITCHELL, and, as one of its parents was N. triandrus, the character of producing more than one

Extract from "The Gardener's Chronicle," May 23rd, 1908-continued.

flower on a scape is perpetuated in the hybrid, and twin flowers are common. The white of its floral parts is of remarkable purity, and the habit is very graceful. The variety BEAUTY is not new, but it cannot be passed over without comment. It is a fine, bold flower of the Incomparabilis type, with a pale yellow periantl: and a large cup that is tinged with orange. This variety may be recommended for any of the purposes to which the Daffodil is utilised, and is especially valuable for cutting. It is one of the cheapest of Daffodils, and should be largely grown wherever these beautiful spring flowers are planted. WHITE LADY is characterised by a broad perianth of beautiful form, the cup being slightly tinged with yellow. It has the advantage of being a free bloomer, and deserves inclusion in a selection of the best varietics. SILVER MOON, SVLVIA, MAY DEW, and FANTASIE are varietics of a similar type, and valuable for naturalising in grass and woodlands. All these, save Sylvia, were raised at Surbiton last year. They bear their inflorescences well aloft, and have starry white perianths. ROSALIND is one of the Dolly-Cup Daffodils, one of the best in its section. The cup is bright yellow, and it is tinged with scarlet. The habit is very robust. AUTOCRAT is a choice flower of the Incomparabilis type, one of the cheapest of Daffodils to purchase. UNA is remarkable in its bold foliage, which appears to droop. The perianth is creamy white, its bold corona being suffused with citron colour, which deepens to apricot at the edge. A fine star-shaped Daffodil is the variety named after FRANK MILES; it is to be recommended for planting in grass land. The beautiful white trumpet Daffodil ALICE KNIGHTS was past its best condition, but enough remained to show what a lovely flower it is. This may be regarded as the best of the early white trumpet section. CZARINA, a giant Leedsii, is certainly among the finest of its class; it is quite new. The yellow trumpet Daffodil LORD ROBERTS is a flower of large size, massive in both corona and perianth, which are coloured golden-yellow. This variety was raised at Surbiton. Our list is still incomplete, but we have no space to describe the many other varieties of which we made note, including LOVELINESS, MONARCH, GLORIA MUNDI, DUCHESS OF WESTMINSTER, CLOTH OF GOLD, CASSANDRA, BEACKWEIL, ARIADNE, CYGNET, GLORY OF LEIDEN, HAMLET, LADY MARGARET BOSCAWEN, JANET IMAGE, PETER BARR, SALMONETTA, QUEEN CHRISTINA, STELLA SUPERBA, VICTORIA, WEARDALK PERFECTION, and BLOOD ORANGE. Most of these are well-known varieties, and all are worthy of a place in a collection of the best kinds."

THE HOME OF THE DAFFODIL. Extract from "The Gardener's Magazine," May 23rd, 1908.

"In one sense Surbiton may be regarded as THE HOME OF THE DAFFODIL, for here are the Nurseries of Messrs. Barr & Sons, and it was Mr. Peter Barr who first made the horticultural world comprehend the beauties and usefulness of this family of spring flowers. Ever since Mr. Barr brought together existing varieties, and commenced to introduce new ones, the firm has also done much work in improving the flowers by cross fertilisation. So long as Daffodils are grown the name of Barr will be held in high esteem.

"This season, the Daffodil season, so far as the big breadths of varieties are concerned, was a very short one at Surbiton, but small batches planted late in various positions enabled visitors to make comparisons and selections for future guidance and use. The newer varieties attracted our attention mostly. The brilliant broad-copped WILL SCARLET was very line; it gives a bit of the finest colour in the family. CASSANDRA and CHAUCER are both good Poet's Narcissi. SYLVIA, a strong-growing Leedsii form, is charming, but WHITE LADY has even greater charms, and is a fine grower, with large white flowers. ROSALIND, a pretty white Burbidgei, with deep red eye, is a fine and useful late Daffodil; while FIREBRAND, in the same section, is notable for its bridiant cup. ROVAL STAR, a grand flat-crowned Daffodil, marks the progress made in this particular direction ; the broad, frilled crown is yellow, orange, and orange-red—a striking combination. POLESTAR, EGREF, and SEQUIN all belong to this latter section, and the last-named, with its flat yellow crown, is very pretty.

"EVELYN HODGE, a cross between N. montamis and N. biflorus, has a round white flower with yellow eye; it is free, late, and quite new. Of different character is the new MERRY MAID, a very rich Barrii form with a vivid red rim to its yellow crown. AGNES HARVEY, a beautiful Leedsii, and BIANCA, a refined flower of the same class, merit special attention. The newer trumpet varieties include the king of white trumpet Daffodils, PETER BARR; G. P. HAYDON, a splendid variety with palest yellow trumpet and white perianth; KNIGHT ERRART, white with lemon trumpet; PHAROAH, creamy white with pale yellow trumpet; C. H. CURTIS, a grand golden flower with beavily frilled trumpet mouth; KING ALERED, golden; and MKS, G. H. BARR, snowy white.

"The Surbiton collection is rich in fine LEEDSH Daffodils, and a few others besides those already referred to are JANET IMAGE, one of the biggest and best; ELAINE, silvery white; DIANA, white and lemon-yellow; MAGGIE MAY, white and citron; HEROINE, snow-white with citron and orange crown; SILVER MOON, silvery white, very pretty; WHITE SLAVE, and WHITE QUEEN, the latter a large and pure white variety with citron-tipped crown.

CULTURE AND ADAPTATION OF THE DAFFODIL OUTDOORS.

Soil and its Treatment. -The Daffodil will thrive in any ordinary garden soil, but prefers a deep, rather moist loam. When the soil is of a dry and sandy nature, it should be deeply dug, if possible at least a season before planting the bullss, well-decayed stable manure being added, and a potato or other vegetable or annual erop grown on the ground. Before the bulbs are planted a sprinkling of quick-line should be spread on the surface and then dug in. If it is not convenient to first take off a erop of Vegetables or Annuals, then, in digging, give a dressing of lime to the top spit, and work in a little well-decayed stable manure one foot below the surface, so as to be out of the reach of the bulbs; the manure is used not as a stimulant but as a sponge to hold moisture in the soil. The ammoniacal properties of manure are injurions to the Daffodil, hence great care is necessary in the use of it. On good retentive loamy soils stable manure is not required, but a dressing of lime may prove beneficial.

FRESHLY DUG SOIL should be allowed to stand vacant two to three weeks before planting, to allow the ground to settle down, otherwise the freshly planted bulbs are sometimes drawn under considerably below their proper depth, and the bloom in consequence is apt to be weakened and retarded the first season.

The BEST AND SAFEST MANURE TO USE is Crushed Bones or Basic Slag (for price see page 37). This should be applied at planting time, and may be mixed with the soil or placed next the bulbs; the Crushed Bones may be applied at the rate of 4 cwt. to the acre, or $1\frac{1}{2}$ oz. to the square yard, and Basic Slag may be applied in same manner at the rate of 1 ton to the acre, or $7\frac{1}{2}$ oz. to the square yard. We recommend for light soils Crushed Bones (provided they are genuine) in preference to Basic Slag. On very poor and DRY SANDY SOLS we recommend in addition SULPHATE OF POTASU (for price see page 37), to be sprinkled annually in the autumn over the surface of the ground, after planting, at the rate of 2 cwt to the acre, or about $\frac{1}{4}$ oz. to the square yard. The potash not only increases the depth of colour in the flowers, but also helps to hold mosture in the soil, a condition so essential to the perfect development of the Daffodil. We also recommend the use of Phytobroma in autumn and spring (ser particulars, page 37).

IN EARLY SPRING, as soon as the Daffodils begin to show above ground, the surface soil should be well broken with a hoe, to sweeten it after the heavy winter rains; a handy tool for this purpose will be found offered on page 38. Where practicable it is advisable to cover the ground in November with some light covering material (the idea is to prevent the autumn rains from beating down the crust of the ground, and to break the severity of a sudden frost). We use for this purpose pulled heather; cut furze or gorse, however, answers the same purpose; cut fern or bracken is bad, as it lies too wet; old pea sticks laid across the ground are good, or on flower beds sprays or small branches of cut evergreens stuck into the ground answer the purpose and look decorative; these, of course, need renewing when they get shabby. Do not mulch the beds with mannre.

Planting and Lifting.—The best time to plant, to obtain the finest flowers, is during September, *although hulhs may be put in as late as Christmas with fairly satisfactory results :* we have planted some Dailodils as late as the second week in February, and had some very good blooms the third week in May. We recommend, however, early planting. The bulbs may be left undisturbed for years in ordinary good loamy soils, but on poor and light soils they are better lifted every two years, as soon as the foliage has died down, and replanted as early as is convenient. Never plant when the ground is wet and sticky. Do not put silver sand around the bulbs of Nareissi except in the case of N. eorbularia.

DEFIL TO PLANT. —The average depth to plant is from 2 to 3 inches, that is to say, a covering of 2 to 3 inches of soil, but not more. As the bulbs vary considerably in size, according to the relative varieties, the best rule to go by is the bulb itself, which should be *covered with soil once and a half its own depth*, measuring the bulb from the collar of its neck to its actual base. On light sandy soils the bulbs may be planted a triffe deeper than on heavy stiff soils, and in the North of England and in cold localities they should be put in a little deeper than in the warmer southern districts.

Position and Grouping for Effect. —All Dalfodils prefer partial shade, although most of them will grow equally well in the open. The varieties which are best grown in partial shade are indicated in the following pages by an *. In the flower border, to obtain the best effect, Daffodils should be planted in large groups of irregular outline, each group or clump to contain one variety only; avoid straight lines, circles, and symmetrical designs. Masses of Daffodils should always appear in the Hardy Flower border, where irregular and effective sweeps can be planted between the clumps of herbaccous plants which in their turn grow up and hide as well as shelter the Daffodil foliage while it is going to rest. In grouping Daffodils the season of lowering should be borne in mind, as the varieties bloom in succession from the end of February to the end of May, during which period, by a judicions arrangement, a constant succession of flower is obtainable. On page 15 we denote the rotation of blooming.

Naturalising Daffodils in Grass, Etc. All Daffodils may be planted in grass with perfect success. To produce the best effect, the three groups should be kept separate : thus the Star Nareissi should not be mixed with the Great Trumpets, nor Poet's Nareissi with the Star Nareissi. In arranging, make the breaks large and bold, scattering the bulls over the ground broadcast with the hand, and planting them where they fall. Avoid symmetrical lines or formal circles as far as possible, as these are never found in nature. In planting under trees, avoid places where the drip from the branches is greatest, also where the main roots of the trees come close to the surface.

VARIETIES SPECIALLY SUITABLE FOR NATURALISING IN WOODLANDS, GRASSLANDS, GLADES, ETC., DELIGITING IN PARTIAL SHADE.—These are mostly free seeders, and will therefore spread naturally they are mostly wild plants—Abscissus, Countess of Annesley, Golden Spur, Henry Irving, Obvallaris, Spurius, English Lent Lily, Princeps, Scottcus, Albreans, Pallidns Precox, Moschatus of Haworth (very pretty in grass), Johnstoni Queen of Spain (in our opinion the most beautiful of all for this purpose), and all varieties of Počitcus, including the old Double White. THE VARIETIES UNDERLINED we do not recommend for the enlitivated border, as they deteriorate the second year, while in woodlands, grass, or meadowland they flourish.

Naturalising Daffodils in Grass, Etc.-continued.

VARIETIES SPECIALLY SUITABLE FOR NATURALISING IN GRASSLANDS, PARKS, ON LAWNS, MEADOWS, ETC.—The following are all very free bloomers, good strong growers, as well as distinctive effective varieties, showing up well from a distance; the flowers are beautiful and valuable for cutting; Emperor, Empress, P. R. Barr, Queen of Spain, W. P. Milner, Horsfieldii, Mrs. Thompson; all handsome trumpet varieties; the following are the best of the chalice-cupped: Incomp. Beauty, Frank Miles, Stella superla, Sir Watkin, Leedsii M. M. de Graaff, Duchess of Brabant, Minnie Hume, and Mrs. Langtry; Barrii conspicuus, Flora Wilson, Crown Prince and Siddington, Odorus and O. rugulosus; of the Poets or Dolly-cupped the following are the best: Ellen Barr, Falstaff, John Bain, the early Pheasant's Eye (Poeticus ornatus), and the late Pheasant's Eye (Poeticus of gardens); and of the double-flowered daffodils : The Old Double Yellow (Telamonius plenus), Butter and Eggs, Eggs and Bacon, and Codlins and Cream.

FOR LAWNS AND TENNIS COURTS which have to be mown carly we recommend the dainty Minimus and Cyclamineus, which make a charming picture. Being very early varieties the grass may be safely mown in May.

VARIETIES SUITABLE FOR PLANTING BY THE WATER SIDE.—Daffodils produce a charming effect when growing at the water's edge. The following varieties we can strongly recommend for this purpose— Odorus and Odorus rugulosus, with their rush-like foliage and graceful golden flowers; Duchess of Westminster, John Bain, and the old late Pheasan's Eye Narcissus (Poètreus), with their graceful stary flowers; Emperor, P. K. Barr, and Empress, three noble trumpeters; Sir Watkin, Barrii conspicuus, Stella superba, Beanty, Frank Miles, and the Double White Poeticus or Gardenia-flowered Narcissus, etc. In choice spots near the water's edge the charming little Cyclaminens should be planted, as also the sulphurcoloured Hoop Petticoat Narcissus (N. Bnlbocodium citrinum), both of which huxuriate in moist grassland.

METHOD OF PLANTING DAFFODILS IN GRASS.—We recommend for this work our SPECIAL BULB PLANTER (see illustration, page 38). By the use of this implement the trouble of planting bulbs in grass is reduced to a minimum. It takes out a clean, circular piece of turf 2 to $2\frac{1}{2}$ inches in diameter, and of sufficient depth. On making the second hole this piece of turf is released from the planter and lies ready on the ground to cover the bulb with. The soil is not in any way tightly pressed and made hard, which is the case when an ordinary dibber is used, and the appearance of the grass is not spoilt; in fact, after planting 10,000 bulbs with this tool on a greensward, one could not detect that the grass had been touched. If the ground is very poor and thin, a compost of fresh soil with an abundance of *Crushed Boncs* (7 lbs, to a bushel) should be made and dropped into each hole before placing in the bulb, a little more should be given as a covering, and then the sod of turf be replaced and pressed down. The bulbs will then be given a fair start in their new quarters. (For price of Barr's Special Bulb Planter, see page 38.)

THE BEST TIME FOR PLANTING IN GRASS is with the advent of the automn rains, when the ground is in a fairly moist condition, it being impossible to plant whilst the ground is hard and solid from the summer heat; moreover, nothing is gained by planting in hot dry ground, to say nothing of the cost and labour of planting.

CUTTING DAFFODILS FOR DECORATION.

To obtain very fine blooms Daffodils should be cut in a young state, just when the bud is bursting. Place in water and allow the flowers to expand in a cool greenhouse or sitting room. The blooms opened in this way are larger and purer in texture and of better colour than those which develop out of doors.

CULTURE OF DAFFODILS IN POTS OR BOXES.

TIME OF POTTING. - Pot as early in autumn as possible to obtain the finest results and earliest blooms.

THE REST COMPOST to pot Daffodils in is a mixture of two-thirds good librous loam (which should be pulled to pieces by the hand and not passed through a sieve, so as to retain in the soil as much old root fibre as possible), and oue-third old decayed leaf soil, with a sprinkling of sharp silver sand, adding 1¹/₂ lbs. of home meal or Phytobrona (see page 37) to every bushel of soil, which mix well together before using. Never pot in soil that is well or sticky. Part's Fertilised Fibre, Shell and Charcoal may also be used; it is light and cleanly to handle, and is a suitable medium for growing all kinds of spring-flowering bulbs in pots or vases, either for indoor decoration or for cutting. (See page 37.)

THE POTS should be carefully washed or wiped clean before using. Never pot in dirty or wet pots.

GOOD DRAINAGE should be secured by placing three or more pieces of broken crocks over the hole, placing the crocks with bevelled sides uppermost, then cover crocks with a little rough fibre from the loam. When boxes are used, the slit at bottom of box should be covered with crocks, a good layer of rough fibrous loam placed at bottom of box, or a layer of leaf soil to ensure perfect dramage.

IN FORTING, the larger bulbs should be two-thirds covered with soil and the pots filled to within half an inch of the rim to allow of watering when in growth. The small bulbs of the miniature species should be covered with half an inch of soil.

AFTER POTTING, stand the pots or boxes outside in the open, under a north wall by preference, on a firm bottom such as a bed of ashes or gravel path to prevent the entrance of worms. The pots should be plunged bodily in Cocoa Fibre, ashes, or old decayed leaf soil, filling in the covering material in between the pots, which should be completely buried to a depth of 4 inches. This will secure a natural and moist condition to the bulbs and encourage root action. So long as the pots are plunged in the open they will require no watering.

they will require no watering. THE FORS OR BONES SHOULD REMAIN PLUNGED for a period of not less than twelve weeks, after which portions may be removed indoors in succession, selecting first those which bloom naturally early. Place first in a cold frame, cool greenhouse, or cold sitting-room free from draughts, but in the light; in a sitting-room select a window that eatches the morning sun. Very weak liquid manurewater may then be given once a week until they come into bloom. Those that are wanted in bloom early may, after the flower buds are advanced, be placed in a warmer temperature, such as a slow forcing-house, but this should never exceed 65' if really fine blooms are desired. The plants should

BARR & SONS, 11, 12 & 13 King Street, Covent Garden, London. 5

Culture of Daffodils in Pots or Boxes—continued.

always be kept as near to the glass as possible and not allowed to get drawn from an insufficient supply of light or air. On no account should bottom heat be given in forcing Daffoduls.

Of the stronger growing sorts use three to six bulbs, according to size of bulb, for a pot measuring $4\frac{1}{2}$ to 6 inches in diameter; of the small miniature kinds, such as N. Minimus, Nanus, Minor, Cyelamineus, Triandrus, Juncifolius, and Corbularias, use twelve to eighteen bulbs for a $4\frac{1}{2}$ to 6-inch pot. These small-flowered dwarfgrowing species are most charming in pots or little shallow pans. The following may easily be had in bloom in January :—N. Minimus, Minor, Nanus, and Cyclamineus, and these may be mingled with Scilla sibirica, Chionodoxas, as both bloom at the same period and produce a charming contrast. The White Hoop Petticoat Narcissus should be potted in almost pure sand kept well moist, and if placed at once in a cold frame after potting may be had in bloom by Christmas. (See Rock Garden Collections of Miniature Daffodils, page 8.)

If Daltodik are wanted in quantity for cutting early in the season, plant thickly in boxes, giving same culture as recommended above for growing in pots. Of the best varieties to grow for early forcing in boxes, the following command a first place: *First early sorts*—Queen of Spain, Henry Irving, Golden Spur, Sir Watkin, Old Double Yellow Daffodil; *Second early sorts*—Emperor, Empress, Horsfieldii, P. R. Barri conspicuus, Incomparabilis Beauty, and Stella superba. All the miniature Daffodils make charming pot plants, especially the following: *N. Minimus, N. Cyclamineus, N. Triandrus albus (Angel's Tears)*, and *N. funcifolius*.

 \mathfrak{G} ? All Daffodils may be grown in pots, but in the following pages we have indicated thus \dagger those kinds which are best for this purpose.

CULTURE OF DAFFODILS IN VASES AND BOWLS.

A charming effect can be obtained by growing Daffodils in fancy vases or bowls, with or without drainage, by simply using our specially prepared Fertilised Fibre, Shell and Charcoal Mixture (3s. 6d. per bushel, ts. per peck); the mixture is light, clean, and nice to handle, and *remains storet* (an important matter where the vases used have no drainage holes); indeed, it is in every way superior to potting soil for growing Daffodils and other bulbs in fancy bowls and vases.

Three bulls of N. Oneen of Spain growing in Barr's Fertilised Fibre in a 4-mch " Doultouware" Vase, without drainage hole.

Culture.-Fill the vase or bowl with the Fibre, Shell and Charcoal Mixture up to within a little below the rim, and plant the bulbs in the same manner as with ordinary potting soil, just covering them. After planting, plunge the bowls or vases out of doors on a bed of cocoa fibre or ashes, and cover entirely with cocoa fibre, leaving them thus for about 12 weeks; they may then be transferred to a sunny window of a cool airy sitting-room (selecting a window that gets the morning sun) or to a cool greenhouse placed close to the glass, where they may be flowered in the same way as pot Hyacinths; they should be kept as near the glass as possible, and given sufficient light and air to prevent the foliage becoming drawn. When the flower buds are advanced, they may be removed to a warmer temperature, such as a slow forcing-house or a warmer sitting-room, still being given as much light as possible. No bottom heat must ever be given, neither should they be placed in too warm a temperature until the flower buds are well developed.

Where it is not convenient to place the bowls outside they may be plunged in cocoa fibre in a cold frame, or cool *airy* cellar, giving sufficient water after planting to make the fibre mixture moderately damp. For the first week or two after planting, water must be given sparingly, sufficient only to keep the fibre mixture damp enough to encourage root action; as soon as the bulbs are well rooted, water should be given more freely, the fibre mixture being then kept quite moist. The fibre mnst never be allowed at any time to become dry, even for a day, or the bulbs will suffer.

SPECIAL FANCY VASES AND BOWLS for growing Daffodils, etc., in.

We have had special little fancy vases made for us by Messrs. Doulton for growing Daffodils and other spring bulbs in our Fertilised Fibre and Charcoal Mixture. The vases are of elegant shape, of a neutral art drab shade, and without drainage holes, thus saving the use of sancers. They will be found most useful for growing not only Daffodils in, but also Tulips. Hyacinths. Crocuses, early Scillas, Snowdrops, Chionodoxas, and Lily of the Valley, also the charming winter-flowering Irises – reticulata, etc., either for table decoration or the greenhouse. During summer they may be used for table decoration planted with Pansies and such low-growing hardy flowers, or for standing little pot-plants in. All Daffodils which may be grown in pots may also be grown in these fancy bowls, and in the following pages we have indicated thus † those kinds most suitable for the purpose.

Barr's "Doulton-Ware" Bulb Vases (as illustrated) : $-2\frac{1}{2}$ in diameter, $-\frac{1}{9}$; 4 in dia. 1/3; $5\frac{1}{2}$ in dia, 2/-; 7 in dia., 3 - each.

Fancy Decorated Japanese Bowls: -5 in. diameter, \cdot 10; 6 in. dia., 1/3; 7 in. dia., 19; 8_1^4 in. dia., $3 \cdot ; 9_2^4$ in. dia., $4 - ; 10_1^{\frac{n}{4}}$ in. dia., 6/-; 12 in. dia., 8 0 each.

Barr's Fertilised Fibre, Shell and Charcoal Mixture, for growing bulbs in Vases, Bowls, Jardinets, etc., 3s. 6d. per bushel; 1s. per peck (bags free).

Barr's 42/= Collection of Daffodils for Pot Culture, for Greenhouse and Indoor Decoration.

電音 For Special Cultural Directions see pages 4 and 5.

The following Daffodils may be gently forced for early bloom during winter and early spring months, and it after flowering they are turned out of pots and carefully planted out (the ground being well watered previously, should it be dry) they will mostly bloom well outdoors the following season :

All strongest selected bulbs.

6 Emperor 6 Excelsior 6 Glory of Leiden 6 Henry Irving 6 Obvallaris 6 Ray Smith 6 Bicolor Empress 6 , Horsfieldii	6 , Victoria 6 Albicans 6 Madame de Graaff 6 Mrs. Thompson 6 Cyclamineus 6 Queen of Spain 6 Incomparabilis Beauty	6 Leedsii Duchess of Westminster	6 Leedsii Katherine Spurrell 6 ,, M. To Naturalise in Shrubberies, Orchards, on Grassy Slopes, etc., and for cutting.

Miniature Daffodils for the "Rock Garden." The following are charming little subjects for rockwork, where their dainty flowers are seen to

The following arc charming little subjects for rockwork, where their dainty flowers are seen to perfection. They should be left undisturbed for years, and, if happy, will soon establish themselves and afford a lovely picture in early spring. All the Corbularia (except Corbularia monophylla) and Cyclamineus like mosture, and should therefore be planted at the foot of the rockery. Corbularia monophylla flourishes in a warm dry sheltered situation, planted in almost pure sand; when coming into bloom give water freely. Triandrus allows (Angel's Tours) and funcifative delight in partial shade and a light gritty soil, and should be given a well-drained position. In the case of these Miniature Daffodlis, the ground may be carpeted with close-growing surface-rooting plants, such as Arenaria caspitosa, Thymus serpyllum vars., T. langinosus, Herniaria glabra, Mossy Saxifragas, etc.; these plants and soiled in rainy weather. We prefer, however, seeing these little gens peeping out of grass, and can supply seed of suitable fine dwarf grasses for sowing in September after planting the bulbs; this sowing will give a fine green carpet by the following spring when the Narcissi bloom.

10 Full descriptions of the following Miniature Daffodils will be found in body of Catalogue.

Barr's New Seedling Daffodils.

Specially notable among the new varieties we exhibited this spring were Banzai, Bedouin, Blazing Star, Buttercup, Catriona, Corallina, Cygnet, Czarina (a grand flower), Eileen Mitchell, Fair Maiden, Fiery Cross, Furnace (with a wonderful brilliant colour), Henri Vilmorin, Isis, Lohengrin, Lola, Lord Kitchener, Loveliness, Mrs. George H. Barr, Oracle, Peter Barr, Pyrrha, Queen Christina, Radiant, Red Emperor, Seraphin, Sirdar, Sir Lancelot, Sunrise, Torchlight, Tennyson, and Venus-all grand Exhibition flowers.

Where we have a record, we give in inches the heights as registered at our Surbiton Nurseries. The relative qualities as we judge them we have indicated by xxx, xxxx, the highest quality flower being given the most marks. The figures after the names indicate the relative period of flowering, (1) being earliest, (5) being latest.

		each	
Alma (Trumpet Daffodil), xxx, <i>new</i> 1907, a seedling from <i>Maximus</i> , and of same elegant form, colour nearly a self, soft canary-yellow, trumpet very large with bold open mouth, deeply flanged, perianth gracefully twisted, flower measuring to $4\frac{1}{2}$ in. across; it likes a deep		, <i>s</i> .	,
moist soil like Maximus		10	
Anne Holloway (Johnstoni), xxx, new 1908, delicate lemon-yellow flowers, very elegant		5	0
Banzai (Trumpet Daffodil), xxxxx, <i>new</i> 1908, a colossal flower with long white perianth, trumpet of great size, a delicate primrose shaded white with wide open mouth deeply flanged and rolled back at brim. AWARD OF MERIT 1905(<i>only a bulb or two for sale</i>)	10	10	0
Bedouin (Giant Incomparabilis), XXXX, <i>new</i> 1908, the FINEST AND MOST BEAUTIFUL DAFFODIL exhibited at the R.H.S. Show, April 14th, 1908, and the EDINBURGH SPRING SHOW, April 15th, 1908. The flower measures more than 4 in. across and has a large white perianth, broad and spreading; cup large and expanded, glowing fiery orange-scarlet, elegantly fluted and crinkled at brim; a grand exhibition variety. FIRST-CLASS CERTICATE, EDINBURGH, April 15th, 1908. See Illustration page 24	24	0	0
Bianca (Leedsii), xxx, <i>new</i> 1906, a very refined flower, beautiful in form and pure in colour, broad solid white perianth, cup globular and prettily fluted, clear lemon with a well-marked dark green even		15	0
dark green eye		* 3	0

BARR'S EXHIBITION GROUP OF NEW DAFFODILS AT THE MIDLAND DAFFODIL SOCIETY'S SHOW, BIRMINGHAM, APRIL 23rd AND 24th, 1908. AWARDED THE GOLD MEDAL.

Barr's General List of Daffodils

For Alphabetical List of all the Varletles offered in this Catalogue, see General Index, page 2 of Cover.

The following list of Daffodils embraces the highest class and most distinct varieties, surpassing in beauty and diversity all other assortments offered to the public. It represents the cream of our Collection (over 500 kinds), and the best of the newest varieties in commerce up to I908, several being offered to the public for the first time this season.

During the past few years we have rejected many of the older kinds which we considered had been superseded by better sorts at equally moderate prices. We can, however, generally supply such if required, as, although we do not catalogue them, we keep a small stock of them at our Nurseries.

Time of Flowering.—The relative period of flowering of the different varieties and species out of doors we have denoted by means of numbers after the names, thus :

- (1) 1st early, flowering from February to early March.
- (2) 2nd early, flowering in March.
- (3) Varieties flowering in mid season, or early in April
- (4) Late-flowering varieties, from middle to end of April.
 - (5) Very late flowering varieties, opening in May.

The actual period of blooming depends upon the season and district; thus in early districts (1) would commence in January and early February, while in colder districts end of February or beginning of March; but the natural rotation would remain the same.

Height.—In most cases we give also the heights in inches as recorded at our Nurseries.

Quality of Flower.—Each season we go carefully over our Daffodil collection with a view to recording the quality of each variety. This we indicate by x, xx, xxx, and xxxx, giving the most marks to those we judge to be the finest. The result we have added to this catalogue, trusting it may be found a useful record to amateurs.

* The varieties marked thus * thrive best under the shade of deciduous trees, naturalised in grass in shady nooks, or on grassy slopes facing north.

† indicates those kinds which should be selected where Daffodils are grown in pots or for exhibition; they are all splendid border varieties.

§ indicates those Daffodils which, besides being fine border plants, make a pretty effect when naturalised in grass; they are all strong growers and free bloomers.

Any Daffodil not offered in this Catalogue we can generally supply, and shall be pleased to quote for such.

Group I.—Magni-Coronati.

including the species Cyclamineus and Hoop Petticoat Daffodils (Bulbocodium or Corbularia), also the hybrids Johnstoni, Backhousei, Tridymus, and Humei.

DISTINGUISHING CHARACTER.—Tude of flowfr as broad as it is long and the crown or trumpet more than firke-quariers as long or longer than the periantil segments or petals.

YELLOW TRUMPET DAFFODILS.

Varieties with Yellow or Primrose-coloured Trumpet and perianth of same shade or lighter (not white).

*Abscissus (4), x, a native of the French perdoz, each. Pyrences, perianth sulphur-yellow, long rich s. d. s. d yellow trumpet, the latest flowering of all Trumpet Daffodik, and valuable to naturalise in quantity in grass, woodlands, etc., ht. 12 in. per 1000, 45/-; per 1000, 5/- 0 9..., —

NARCISSUS JOHNSTONI.

Natural Hybrid of Ajax x Triandrus, with reflexing perianth, and tube longer than it is wide.

per doz. each s, d, s, d

\$†*Queen of Spain (2), xxx, found by Mr. Peter Barr in Spain. One of the most beautiful, distinct, and graceful Daffodils in cultivation, and unsurpassed either for bedding, pot or vase culture, or for naturalising in woodlands, etc. The flowers vary slightly in size, but all are of a uniform soft, delicate, clear yellow, with a gracefully reflexing perianth, trumpet of distinct and elegant form, ht. 12 in. Naturalised in grass under trees, this Daffodil forms a delightful feature in the garden. It also adapts itself readily to bowl culture in cocoannt fibre and charcoal, or damp pebbles and gravel, and grown thus affords an artistic decoration for the sitting-room. Awarded FLORAL CERTI-CATE at the Daffodil Conference, 1896. As we have to depend upon collected bulbs for our annual supply, and these have to be taken up while the folioge is still green, there is a possibility that all the bulbs may not bloom the first season, but a fair proportion will. huth

GROUP II.-MEDIO-CORONATI.

Chalice-Cupped Daffodils or Star Narcissi, Etc.

(QUELTIA, PHILOGVNE, GANYMEDES, ETC., OF SALISBURY, HAWORTH, AND HERBERT; PEERLESS, NONSUCH, ETC., OF PARKINSON.)

The varieties of this group are hybrids, excepting Triandrus and Juncifolius, which are species. *Incomparabilis* and *Barrii* are the result of garden crosses between yellow Trumpet Daffodils and Narcissus Poëticus; *Leedsii*, a garden cross between White Trumpet Daffodils and Poëticus; *Melsoni*, the result of a Trumpet Bicolor var. crossed with Poëticus; *Bernardi*, a natural cross between Abscissus and Variiformis (Trumpet Daffodils) and Poeticus; *Macleaii*, an aucient hybrid, origin unknown, but it may be a cross between a Trumpet Bicolor and a Tazetta or Polyanthus Narcissus; *Odorus*, an ancient hybrid between a Trumpet Daffodil and Narcissus Jonquilla.

The varieties in this group commence flowering in March, and furnish a succession till May. *They are all of elegant beauty*, and as cut flowers are extensively used for furnishing vases and table bouquets. For this purpose they should be grown in quantity in boxes and for early bloom (see here 4).

Example of a Flower in Group 11.) forced for early bloom (see page 4).

NARCISSUS INCOMPARABILIS.

DISTINGUISHING CHARACTER. Depth of crown or cup more than one-third and up to three-quarters the length of the perianth segments (petals).

NARCISSUS TRIANDRUS (stra. Ganymedes).

The White Cyclamen-flowered Daffodil, with reflexing perianth.

THE DAINTY LITTLE "ANGEL'S TEARS" DAFFORL (*Triandrus albus*) was found by our Mr. Peter Barr on the mountains of Portugal and Spain, growing in very hard, firm, fine gritty soil, sometimes in the narrowest fissures of granite and slatestone rocks. All in this section make lovely little pot plants, and grown thus should be given cold frame culture. Established on rockwork they form a picture full of grace and beauty. They prefer shade, a gritty soil, and well-drained position.

†Albus (3), an exquisitely beautiful little flower, appropriately called the "Angel's per doz, each, Tears" Daffodil, the flowers are creamy white and are variable in size, perianth <i>s. d. s. d</i> clegantly reflexed, ht. 7 in. As we have to depend upon collected bulbs for our annual supply, and these have to be taken up while the foliage is still green, a proportion may possibly not bloom the first season. The bulbs should therefore be left undisturbed to	i
<i>establish themselves</i>	
,, Larger-size bulbs [specially recommended] ,, S/6 1 3 0 2	2
, A few extra strong bulbs (for pot culture,) , $15' - 2 303$	3
†Calathinus (3). One of the most beautiful little Daffodils in existence. The flowers, which are snowy white, are more than twice the size of <i>Triandrus albus</i> , with long goblet-shaped crown prettily fluted, and are borne two to three on a stem; the foliage has a enrious twisting habit, ht. 7 in. For pot culture and rockwork it is a perfect gem. Mr. Peter Barr collected this rare Daffodil some years ago on one of the Glénan Isles, the collecting being attended with a good deal of risk. The bulbs we offer bloom very	
freely	5

GROUP III.—PARVI-CORONATI. Dolly-Cup or Poet's Narcissi.

BUREIDGEL VANLSSA. (Example of a Flower in Group 111.)

Dolly-Cup or Poet's Narcissi.

DISFINGUISHING CHARACTER -DEPTH OF CUP LESS THAN ONE-QUARTER THE LENGTH OF THE PERIANTH SEGMENTS (PETALS).

In this section, *Poélicus* (the true Poet's Daffodil) is the flower popularly called the **Narcissus**; *Burbidgei* is a hybrid between Incomparabilis and Poéticus, and is the connecting link between Groups H. and HI., *Biflorus* is Parkinson's Primrose-Peerless, a hybrid of Tazetta and Poéticus; *Gracilis* and *Tenuior* are the Helena of Haworth; *Jonquil* the Jonquilla of Linneus; *Polyanthus Narcissus* the Hermione of Haworth and Tazetta of Sibthorp.

NARCISSUS BURBIDGEI.

Hybrid Poet's Narcissi, or Dolly=Cup Daffodils.

These with their light and graceful habit and beautiful blossoms are much valued as pot plants (3 to 6 in a pot), and for vases, bouquets, and buttonholes; in beds and borders they are specially attractive, while naturalised in grass few plants are so beautiful.

The Burbidgei Narcissi differ from *N. Počticus* in the cup of the flower being generally a trifle longer and not so flat; the early forms commence flowering before *Počticus ornatus*, and continue flowering in succession, one variety after another, from March to the middle of May.

NARCISSUS POËTICUS.

The true Narcissus or "Poet's Daffodils." These all have snowy white perianth segments (or petals), with a flattened cup, cinnabar-red or edged with cinnabar-red.

The earlier flowering varieties afford a very beautiful decoration indoors when grown in pots (5 bulbs in a pot) or forced, while as border plants and for naturalising in grass they are all of the greatest value. Referring to the great beauty of these Poet's Daffodils when naturalised, Mr. William Robinson

writes: "Four years ago I cleared a little valley of various fences. Through this runs a streamlet, and we grouped the Poet's Narcissi near it, also in a little orchard that lay near, and through a grove of oaks. This year the whole landscape was a picture such as one might see in an Alpine valley."

DAFFODIL NOTICES.

Naming Daffodils. – Cut specimens of Daffodils we undertake to name correctly, at the charge of 4/2, each, 33, per dozen, to cover attendant expenses. Address all cut specimens to be named, accompanied by a remittance, to our Nurseries, Surbiton, Surrey

Daffodil Prizes. – Particulars of Competitions, Spring 1909, for Barr's Silver Daffodil Vases, will be sent on application.

MANURES, SOILS, FIBRE, VASES & BOWLS FOR DAFFODILS.

Basic Slag, best quality, per cwt. 6/6; per 14 lbs. 1/- (bags free).

Bone Meal (Genuine Crushed Bones), best quality, per cwt. 12,6; per 7 lbs. 1 - (bags free).

Sulphate of Potash, finest quality, per ewt. 21/-; per 7 lbs. 1/9 (bags free).

Barr's Phytobroma, for Daffodils, Hyacinths, Tulips, etc. We can confidently recommend this as a safe general manure i it should be mixed with the soil *below* the bulbs at planting time at the rate of 2 to 3 oz. to the square yard, and in spring, when the bulbs are showing above ground, a top-dressing may be given -using the same quantities.

For Pots, mix *Phytobroma* with the soil, to be used at the rate of 1 lb. to the bushel, and in spring, when growth is showing, top dress once a fortnight, using a small teaspoonful and well mixing with surface soil. 2-lb. tin, 1/-; 7 lbs. 2/6; 14 lbs. 4/6: 28 lbs. 7/6; 56 lbs. 12/6; 1 evt. 20/- (*bags free*).

Barr's Special Mixed Potting Soil, containing a suitable quantity of Phytobroma, 2/6 per bushel (*bags free*).

Barr's Specially Prepared Fertilised Fibre, Shell, and Charcoal Mixture, for growing bulbs in vases, bowls, jardinets, etc. (see fage 4). 3/6 per bushel; t/- per peck (bags free).

Small Pebbles and Charcoal, 6d. per quart ; 3/6 per peck.

Barr's Special Doulton Ware Bulb Vases (without drainage hole), suitable for growing Daffodils, etc., in. : $2\frac{1}{2}$ in. diameter, -9; 4 in. dia. 1/3; $5\frac{1}{2}$ in. dia. 2/-; 7 in. dia. 3/- each.

Fancy Decorated Japanese Bowls (without drainage hole):--5 in. diameter. -/10; 6 in. dia. 1/3; 7 in. dia. 1/9; S_4^1 in. dia. 3/-; 9_2^1 in. dia. 4/-; 10_4^3 in. dia. 6/-; 12 in. dia. 8/6 each.

USEFUL TOOLS FOR BULB PLANTING, Etc.

Barr's Special Bulb Planter (Regd. 368338), specially designed for planting Daffodils and other bulbs in grass. This tool cuts and lifts a clean circular piece of turf which is released from the cup when the second hole is made, and lies ready at hand to fill in the holes when the bulbs have been

put in, it being only necessary to remove a little of the soil from the bottom of the sod. A time must be chosen for planting when the ground has become softened after carly autumn rains and not when in a hard and baked condition, as it is then impossible to use this or indeed any other tool with success. By the use of BARR's SPECIAL BULB PLANTER a large quantity of bulbs may

be planted in a very short time, and without the least disturbance of the sward. The length of the tool is 38 inches over all, weight about $3\frac{1}{2}$ lbs. The cup is manufactured from high-class hardened steel and always carries a keen cutting edge. Supplied in 3 sizes of cup :- To cut out a circular hole 2 inches diameter.

, ,

,,

,,

222We shall send the medium size (21 in.) if no instructions to the contrary are given.

Special Bulb Dibber Barr's (Regd. 468878), specially designed for dibbling bulbs into borders, etc. ; steel shod, with strong iron tread and cross wooden handle; a good strong heavy tool, weight about $6\frac{8}{4}$ lbs, length 36 inches over all. 9/6 each.

10/6 each.

Special Bulb Trowel, made of best steel, Barr's specially designed for lifting and planting bulbs, etc. It will be found of great value for general garden purposes, and far in advance of the old-fashioned trowel. 2/9 each.

New Pattern Daffodil Hoe, a very useful tool for breaking the surface soil in the Flower Border during dry weather, and especially in early spring

when Dafiodils are just showing; also a useful weeding tool. With 3 ft. handle (41 inches over all, and weight under 1 lb.) 1/9 each, with short handle (12¹/₂ inches), 1/3 each.

For Wooden Labels and other Garden Requisites, see BARR'S SEED GUIDE. Free on application.

DAFFODIL COLOURED AND UNCOLOURED PLATES.

These Daffodil Plates can be had, post free, at the following charges :-

- (1) Two large Uncoloured Illustrations, one representing a group of Yellow Trumpet Daffodils, and the other a group of White Trumpet Daliodils, drawn and arranged for the "Gardener's Chronicle" by Agnes Barr. The two Plates for 1s.

Returned empties should have the sender's name on the address label for identification, and an advice sent by post, stating date of despatch and name of Railway Co.
- Catalogues. Our Seed Guide is published in January, Descriptive Catalogue of Bulbs and Tubers for Winter and Spring Planting in January, Hardy Plant Catalogue 1st of March, Daffodil and General Bulb Catalogues in August. We are always pleased to forward any of these Catalogues, free of charge, to friends of our Customers on receipt of a line requesting us to do so.
- Our Surbiton Nurseries.-Visitors are invited during Spring to see our magnificent Collections of Daffodils and Tulipk in bloom. The Nurseries are situated less than a mile from Surbiton Station on the London and South-Western Railway. Cabs are always to be had at Surbiton Station,
- Gardeners.-We keep a special Register of Gardeners in want of situations, and shall be pleased to put such in communication with any of our Customers requiring Head Gardeners.
- Registered Telegraphic Address-BARR, LONDON.

Telephone-2991 CENTRAL.

Notices to our Foreign and Colonial Correspondents.

- Prepayment necessary .- Owing to the difficulty of collecting accounts abroad, we beg that Customers will kindly enclose with their Orders a remittance, a draft, or an "order to pay 'ou a London Bank, or Agent; the remittance should be sufficient to cover cost of carriage when the freight is required to be paid in advance.
- Cash Discount 5%.-In the case of Prepaid Orders to value 20s, and upwards we allow a discount of is, in the \mathcal{L} from the amount of Bulbs or Seeds ordered, which may either be deducted by the Customer when remitting, or if this is not done, a liberal equivalent in goods will be added to the order.
- Carriage .-- No allowance for Carriage can be made in the case of Foreign Orders; the extra attention necessary precludes any kind of allowance in this respect.
- Packing .- A moderate charge will be made where special materials have to be used, such as Sphagnum Moss, Oil-silk, or hermetically sealed tin cases, and where any special packing necessitates a great deal of labour (as in the case of some Plant Orders), when out-of-pocket expenses only will be charged.
- Parcel Post Rates.-AUSTRALIAN COMMONWEALTH (P. & O. and Orient Lines direct): 6d. per lb. (1s. for the first lb.). Via Italy (journey 6 days shorter): not exceeding 1 lb., 2s.; every additional lb. 6d.

- Shipping, etc .-- In Shipping Bulbs and Plants to Australia, New Zealand, America, India, and the Cape, we exercise great care in selecting, preparing, and properly packing the same. Still there are so many contingencies that we cannot, in any way, hold ourselves responsible for the condition in which Plants or Bulbs reach their destination. Our Customers will confer a favour if they report, on arrival, the condition of the goods. Our experience in successfully preparing and shipping Seeds, Bulbs, and Plants to India and the Colonies extends over a long period.
